

LockDown Quiz

macOS Build Instructions

Prerequisites

Before you begin, make sure the following are installed on your Mac. Open **Terminal** (Applications > Utilities > Terminal) and run each command below.

Step 1 - Install Homebrew (if not installed)

Homebrew is the macOS package manager. Check if it's installed first:

```
brew --version
```

If you see a version number, skip to Step 2. If not, paste this into Terminal:

```
/bin/bash -c "$(curl -fsSL  
https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

Follow the prompts. You may need to enter your Mac password.

Step 2 - Install Node.js

Node.js is required to build the Electron app. Paste this into Terminal:

```
brew install node
```

Verify it installed correctly:

```
node --version
```

You should see a version number like v20.x.x or higher.

Step 3 - Install Git (if not installed)

Check if Git is already installed:

```
git --version
```

If not installed, paste this:

```
brew install git
```

Building the Application

Step 4 - Clone the Repository

This downloads the quiz platform code to your Mac. Paste this into Terminal:

```
git clone git@github.com:davechipotle22-cmyk/quiz-platform.git
```

If you get a permission error, use HTTPS instead:

```
git clone https://github.com/davechipotle22-cmyk/quiz-platform.git
```

Step 5 - Navigate into the Project Folder

Move into the downloaded folder. Paste this:

```
cd quiz-platform
```

Step 6 - Install Dependencies

This downloads Electron and the build tools. Paste this and wait for it to finish:

```
npm install
```

This may take 2-5 minutes depending on your internet speed. You'll see a progress bar.

Step 7 - Test the App (Optional)

Before building, you can test that everything works. Paste this:

```
npm start
```

The quiz app should open in a window. Press Ctrl+C in Terminal to close it when done.

Step 8 - Build the macOS App

This creates the final .dmg installer file. Paste this:

```
npm run build:mac
```

This takes 3-10 minutes. When finished, the installer will be in the **dist/** folder.

Step 9 - Find Your App

Open the dist folder to see your built app:

```
open dist/
```

You will see a file called **LockDown Quiz-1.0.0-universal.dmg**. This is the installer you distribute to students.

Distributing to Students

Share the **.dmg** file with students via email, Google Drive, or any file sharing service.

Students install it by:

1. Double-click the .dmg file
2. Drag 'LockDown Quiz' into the Applications folder
3. Open it from Applications

If macOS blocks the app: Go to System Settings > Privacy & Security > scroll down and click 'Open Anyway' next to the LockDown Quiz message.

Quick Reference - All Commands

Copy and paste these commands one at a time into Terminal:

```
git clone git@github.com:davechipotle22-cmyk/quiz-platform.git
cd quiz-platform
npm install
npm run build:mac
open dist/
```
